E.3. WMI impersonation Rights	20
E.4. Network Access	22

Chapter 1.Introduction

This chapter will introduce the Getac WMI and provide users with an overview.

1.1. Overview

Most of Windows® operating systems provide Windows Management Instrumentation (WMI), providing users with the information of local or remote PCs. Getac BIOS WMI interface receives the instruction from Operating system and access the BIOS settings. IT administrator can query and set all the BIOS settings (except read only items), recover the BIOS to factory settings, set and change passwords, and modify the boot order in remote PCs.

1.2. Disclaimer

BIOS settings are related to the WMI instruction and the computer device. Getac assumes no liability for damages incurred directly or indirectly from errors, omissions or discrepancies between the computers' BIOS and the manual.

Chapter 2.Getac WMI Interface

In this chapter, details of how to operate the Getac WMI Interface to access the BIOS settings in remote PCs are illustrated.

2.1. Configure the BIOS Settings

The following interface accesses the Getac BIOS settings.

Namespace: “\root\WMI”

2.2. Query BIOS User Password Status

Users can check if the password is registered in this class.

Class name/Method name: `Query_GetacBIOSPassWord`

Type: Method

Example: “`SUVPW`”

Item table:

Page	Item	WMI Item	Attr.
Security	Set Supervisor password	<code>SUVPW</code>	R
	Set User password	<code>USERPW</code>	R

Return value: “`Registered`”, “`Null`”, “`Not support`”

2.3. Set BIOS User Password

Supervisor Password and User Password are set in this class. If users want to set User Password, the Supervisor Password must be set first.

If the Supervisor Password is clear, then the User Password will be clear as well.

Class name/Method name: `Set_GetacBIOSPassWord`

Type: Method

Example: “`SUVPW,1e234,AB4567`”

Item table:

Page	Item	WMI Item	Attr.	Current PW	New PW
Security	Set Supervisor password	SUVPW	W	*note1	*note2/3
	Set User password	USERPW	W	*note1	*note2/3

*note1: If the password is not registered, the blank is set to Current PW for password setting.

*note2: If the blank is set to New PW, the current password will be deleted.

*note3: By default, the maximum length of a password is **10**. For models supporting “StrongPassword”, the maximum length of a password can be up to **64** and the minimum length as **4**.

Return value: “Success”, “Fail”, “Not support”

Note : If the WMI item is not provided, the return value will be “Not support”

2.4. Switch to the BIOS Configure Mode

Regarding BIOS security, users must switch to the BIOS configure mode before accessing the Getac WMI Interface. If Getac WMI interface receives wrong Supervisor Password 3 times, Getac WMI interface will lock down due to security reasons. If the Getac WMI interface is locked, any access will return “Locked”. Users can enter BIOS setup utility to unlock.

Class name/Method name: Set_GetacBIOSConfigMode

Type:Method

Example: “1234,SetStart” (if Supervisor password [SUVPW] is 1234.)

Item table:

WMI Item	Description
SUVPW	Supervisor password(*note1)
SetStart	Start of the access mode of BIOS when the supervisor is registered.
SetEnd	End of the access mode of BIOS.

*note1: By default, the maximum length of a password is **10**. For models supporting “StrongPassword”, the maximum length of a password can be up to **64** and the minimum length as **4**.

Return value: “Success”, “Fail”, “Not support”, “Locked”

2.4.1. Load the default BIOS settings

This class name can recover BIOS to default settings.

Class name: Load_GetacDefaultSettings

Type: Method

Return value: “Success”, “Fail”, “Locked”

Note: As security-related options, the password is not recovered even if “load default” is requested.

2.4.2. Query/Change the Getac BIOS Settings

This section contains details on the WMI implementation for Query/Change Getac BIOS settings.

The queries can be used to retrieve setting values currently set.

Class name/Method name: Query_GetacBIOSSettings

Type: Method

Example: “InternalNumlock”

Note: If the Query item is not provided, the return value will be “Not support”

To change/set the BIOS settings,

Class name/Method name: Set_GetacBIOSSettings

Type: Method

Example1: “LegacyUSBSupport,Enabled”

Example2: “BootTypeOrder, HardDisk, USBDisk, USBFloppy, Network, USBCD”

Return value: “Success”, “Fail”, “Locked”, “Not Support”

Item table:

Page	Item	WMI Item/ Return Item	Attr.	Return/AcceptValues
Information	EC Version	ECVersion	R	R1.00.070520
	Virtual MAC Address (*Note1)	VirtualMAC	R	XX-XX-XX-XX-XX-XX
Main	Internal Numlock	InternalNumlock	R/W	"Disabled","Enabled"
	FN and Ctrl Key Placement	FNCtrlKeyPlacement	R/W	"CtrlFN"," FNCtrl"
	WMI Version	WMIVersion	R	"0.00"- "9.99"
Advanced	Wake Up Capability	HomeButtonWakeup	R/W	"Disabled", "Enabled"
	Power Button Delay	PowerButtonDelay	R/W	"NoDelay", "1sec", "2sec"
	AC Initiation	ACInitiation	R/W	"Disabled", "Enabled"
	Magnetic Sensor	MagneticSensor	R/W	"Enabled", "Disabled"
	USB Power-off Charging	USBPowerOffCharging	R/W	"Disabled", "Enabled"
	Screen Tapping for Boot Options	ScreenTappingforBootOp	R/W	"Disabled", "Enabled"
	MAC Address Pass Through	MACAddressPassThrough	R/W	"Disabled", "Enabled"
	Secondary Boot Block Backup	SBBBackup	R/W	"Disabled", "Enabled"
	I226 PXE Boot	I226PXEBoot	R/W	"Disabled", "Enabled"
	Active Management Tech. Support (*Note2)	IntelAMTSupport	R/W	"Disabled", "Enabled"
		IntelAMTSetupPrompt	R/W	"Disabled", "Enabled"
		IntelAMTUSBProvision	R/W	"Disabled", "Enabled"
		IntelTME	R/W	"Disabled", "Enabled"

Page	Item	WMI Item/ Return Item	Attr.	Return/AcceptValues
Virtualization Tech. Device Configuration	IntelVT	IntelVT	R/W	“Disabled”, “Enabled”
	VTd	VTd	R/W	“Disabled”, “Enabled”
	WirelessLAN	WirelessLAN	R/W	“Disabled”, “Enabled”
	WWAN	WWAN	R/W	“Disabled”, “Enabled”
	Bluetooth	Bluetooth	R/W	“Disabled”, “Enabled”
	MediaCardReader	MediaCardReader	R/W	“Disabled”, “Enabled”
	SmartCardReader	SmartCardReader	R/W	“Disabled”, “Enabled”
	RFID	RFID	R/W	“Disabled”, “Enabled”
	FingerprintScanner	FingerprintScanner	R/W	“Disabled”, “Enabled”
	FrontWebcam	FrontWebcam	R/W	“Disabled”, “Enabled”
	RearCamera	RearCamera	R/W	“Disabled”, “Enabled”
	BarcodePM	BarcodePM	R/W	“PowerSaving”, “QuickStart”
	Thunderbolt	Thunderbolt	R/W	“Disabled”, “Enabled”
	SystemUSBPort	SystemUSBPort	R/W	“Disabled”, “Enabled”
	DockingUSBPortSetting	DockingUSBPortSetting	R/W	“USB2.0”, “USB3.0”
	InternalMicrophone	InternalMicrophone	R/W	“Disabled”, “Enabled”
	InternalSpeaker	InternalSpeaker	R/W	“Disabled”, “Enabled”
	SerialPort	SerialPort	R/W	“Disabled”, “Enabled”
Security	Asset Tag	AssetTag	R/W	32 characters maximum
	StrongPassword	StrongPassword	R/W	“Disabled”, “Enabled”
	Password on Boot	PasswordonBoot	R/W	“Disabled”, “Enabled”
	PasswordConfig	PasswordConfig	R/W	“04”-“64”
	Secure Boot Configuration (*Note3)	LoadMSFTUEFICA	R/W	“Disabled”, “Enabled”
Security Freeze Lock	Security Freeze Lock	SecurityFreezeLock	R/W	“Disabled”, “Enabled”

Page	Item	WMI Item/ Return Item	Attr.	Return/AcceptValues
	Intel Trusted Execution Technology (*Note2)	IntelTrustedExeTech	R/W	“Disabled”, “Enabled”
Boot	Boot Type Order (*Note4)	BootTypeOrder	R/W	“HardDisk”, “USBDisk”, “USBCD”, “Network”, “CDROM”
	Boot Device	HardDiskDrive	R/W	“Off”, “On”
		USBDiskDrive	R/W	“Off”, “On”
		USBCDDVDDrive	R/W	“Off”, “On”
		NetworkDrive	R/W	“Off”, “On”
	CDDVDDrive		R/W	“Off”, “On”
	Fast Boot	FastBoot	R/W	“Disabled”, “Enabled”
	Alternative WBM option	AlternativeWBM	R/W	“Disabled”, “Enabled”

*Note1: It will return virtual MAC address when there is no physical network card in this system.

*Note2: Only AMT SKU systems are supported.

*Note3: Supervisor password is needed. Otherwise, system will return value as “fail”.

“Disable” option won’t delete MSFT CA Key.

To delete it, please restore to Factory Defaults manually.

Disable bitlocker function before executing LoadMSFTUEFICA. Otherwise, input bitlocker recovery key will be required after LoadMSFTUEFICA.

*Note4:

“BootTypeOrder” Individual model return/accept values case	
B360/S510	Others
“HardDisk”, “USBDisk”,	“HardDisk”, “USBDisk”,

“Network”, “USBCD”, “CDROM”	“Network”, “USBCD”

Appendix B. VB Script to set the supervisor password

User can set the Supervisor Password with below VB Script when the Supervisor Password is not registered and “1” is set.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:\\" &strComputer& "\root\WMI")

'-----
'  
' Obtain an instance of the class
'  
' using a key property value.
'-----

Set objShare = objWMIService.Get("Set_GetacBIOSPassWord.InstanceName='ACPI\PNP0C14\0_0'")

'-----
'  
' Obtain an InParameters object specific to the method.
'-----

Set objInParam = objShare.Methods_("Set_GetacBIOSPassWord").inParameters.SpawnInstance_()

'-----
'  
' Add the input parameters.
'-----

objInParam.Properties_.Item("DataIn") = "SUVPW,,1"

'-----
'  
'Execute the method and obtain the return status.
'  
' TheOutParameters object in objOutParams is created by the provider.
'-----

Set objOutParams = objWMIService.ExecMethod("Set_GetacBIOSPassWord.InstanceName='ACPI\PNP0C14\0_0'",
"Set_GetacBIOSPassWord", objInParam)

'-----
'  
' ListOutParams
'-----

Wscript.Echo "Out Parameters: "&objInParam.Properties_.Item("DataIn")
Wscript.echo "DataOut: " &objOutParams.DataOut
```

Appendix C. VB Script to Query the Internal Numlock

Users can query internal numlock with below VBScript.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:\\" &strComputer& "\root\WMI")

'-----
'  
' Obtain an instance of the class
' using a key property value.
'-----

Set objShare = objWMIService.Get("Query_GetacBIOSSettings.InstanceName='ACPI\PNP0C14\0_0'")
Set objShare1 = objWMIService.Get("Set_GetacBIOSConfigMode.InstanceName='ACPI\PNP0C14\0_0'")

'-----
'  
' Obtain an InParameters object specific to the method.
'-----

Set objInParam = objShare.Methods_("Query_GetacBIOSSettings").inParameters.SpawnInstance_()
Set objInParam1 = objShare1.Methods_("Set_GetacBIOSConfigMode").inParameters.SpawnInstance_()

'-----
'  
' Add the input parameters.
'-----

objInParam.Properties_.Item("DataIn") = "InternalNumlock"
objInParam1.Properties_.Item("DataIn") = ",SetStart"

'-----
'  
' Execute the method and obtain the return status.
' TheOutParameters object in objOutParams is created by the provider.
'-----

Set objOutParams1 = objWMIService.ExecMethod("Set_GetacBIOSConfigMode.InstanceName='ACPI\PNP0C14\0_0'",
"Set_GetacBIOSConfigMode", objInParam1)

Set objOutParams = objWMIService.ExecMethod("Query_GetacBIOSSettings.InstanceName='ACPI\PNP0C14\0_0'",
"Query_GetacBIOSSettings", objInParam)

objInParam1.Properties_.Item("DataIn") = ",SetEnd"

Set objOutParams1 = objWMIService.ExecMethod("Set_GetacBIOSConfigMode.InstanceName='ACPI\PNP0C14\0_0'",
"Set_GetacBIOSConfigMode", objInParam1)

'-----
'  
' ListOutParams
'-----

Wscript.Echo "Out Parameters: "&objInParam.Properties_.Item("DataIn")
Wscript.echo "DataOut: " &objOutParams.DataOut
```

Appendix D. Check Procedure for Remote Access

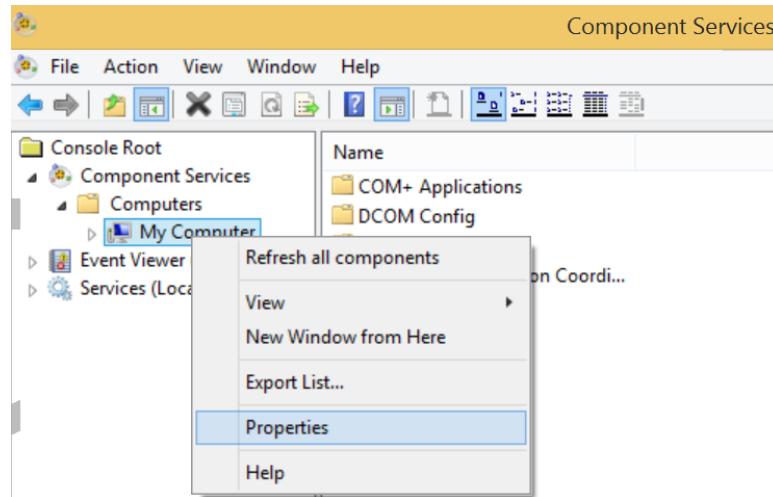

E.1. DCOM permissions

Step 1. Search -> “Dcomcnfg”

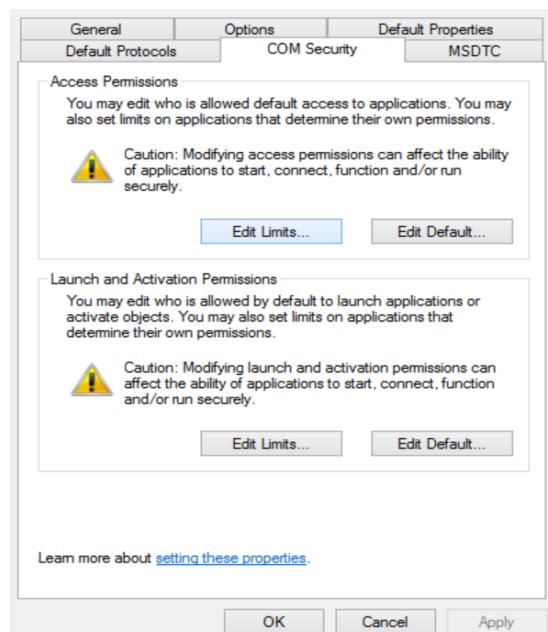

Step 2. Run “Dcomcnfg”

Step 3. Expand “Component Services” -> “Computers” -> “My Computer”

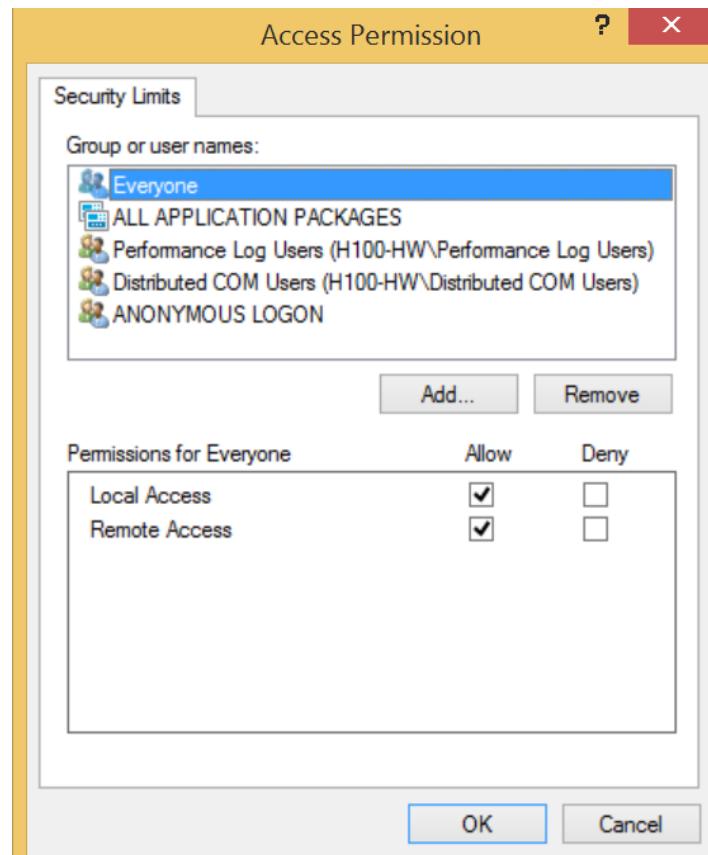

Step 4. Open “My Computer Properties”

Step 5. Go to “COM Security” tab

Step 6. Enter “Access Permissions” by clicking “Edit Limits” and set “Local Activation” and “Local Launch” to Allow for “Everyone”.

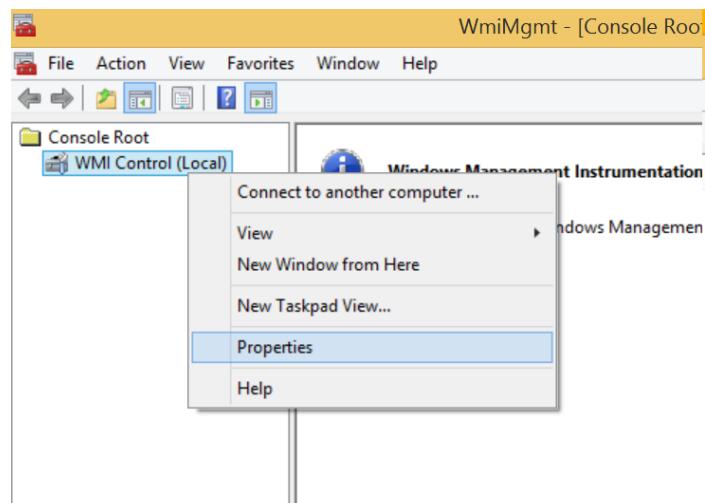

E.2. WMI permissions

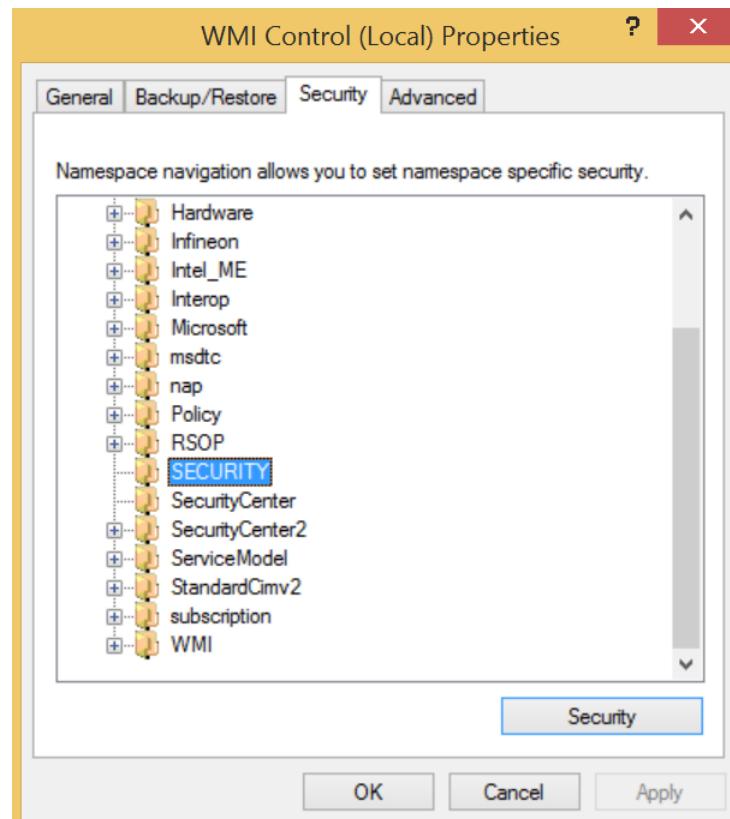

Step 1. Search -> “WMImgmt.msc”

Step 2. Run “WMImgmt.msc”

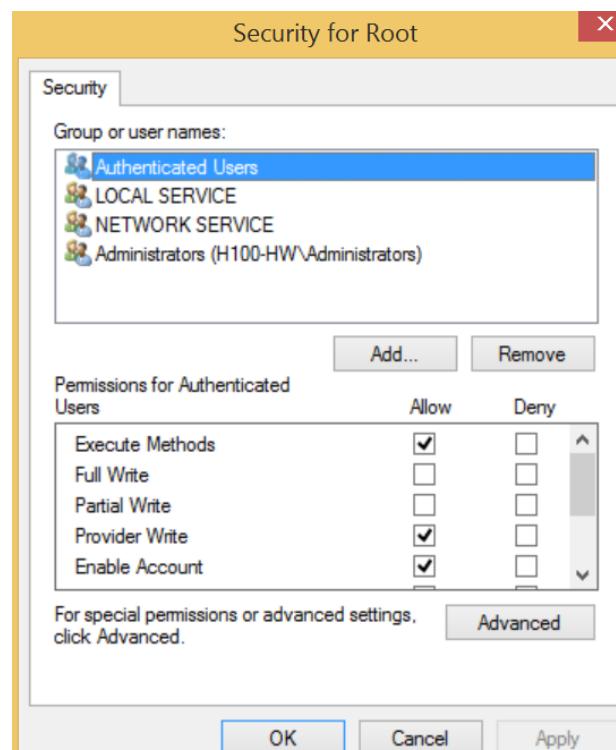

Step 3. Right click on WMI Control and open “Properties”

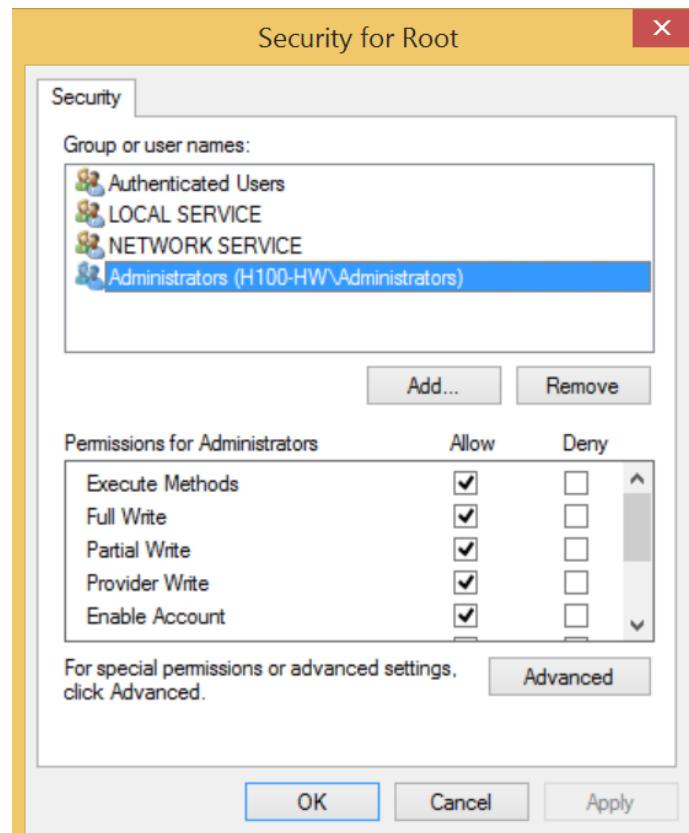

Step 4. Select “Security” tab in WMI Control Properties and open “SECURITY”

Step 5. Ensure “Execute Methods”, “Provider Write” and “Enable Account” are set to Allow in Permission for Authenticated Users

Step 6. Ensure all permissions are set to Allow in Permissions for Administrators

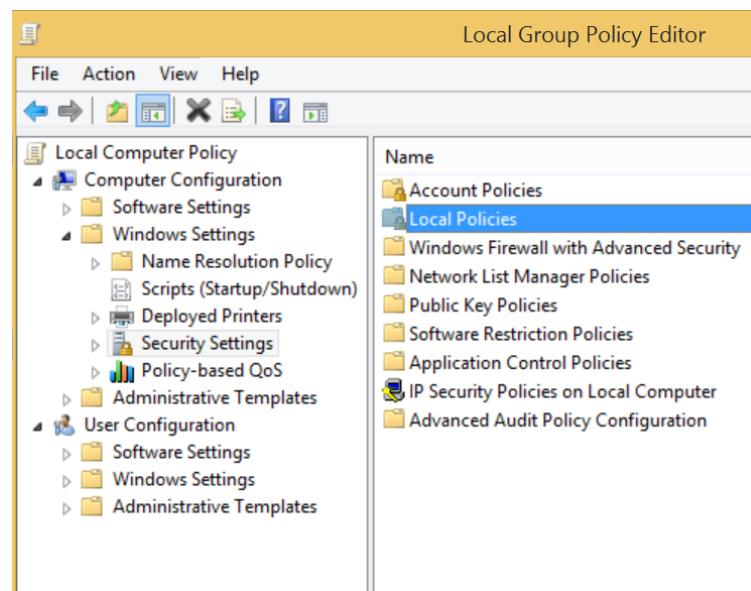

E.3. WMI impersonation Rights

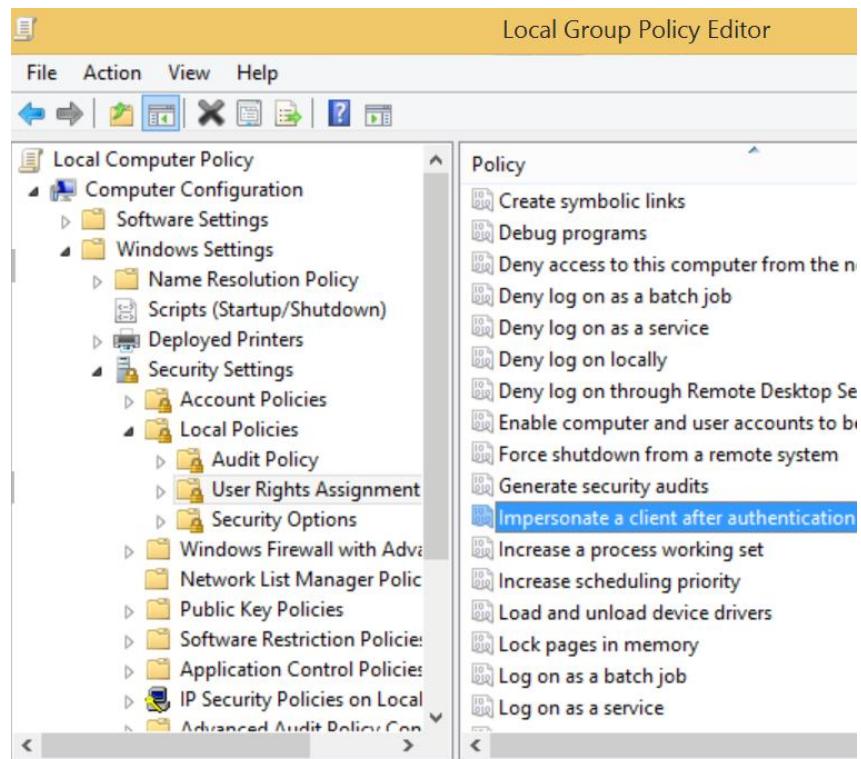

Step 1. Search -> “gpedit.msc”

Step 2. Run “gpedit.msc”

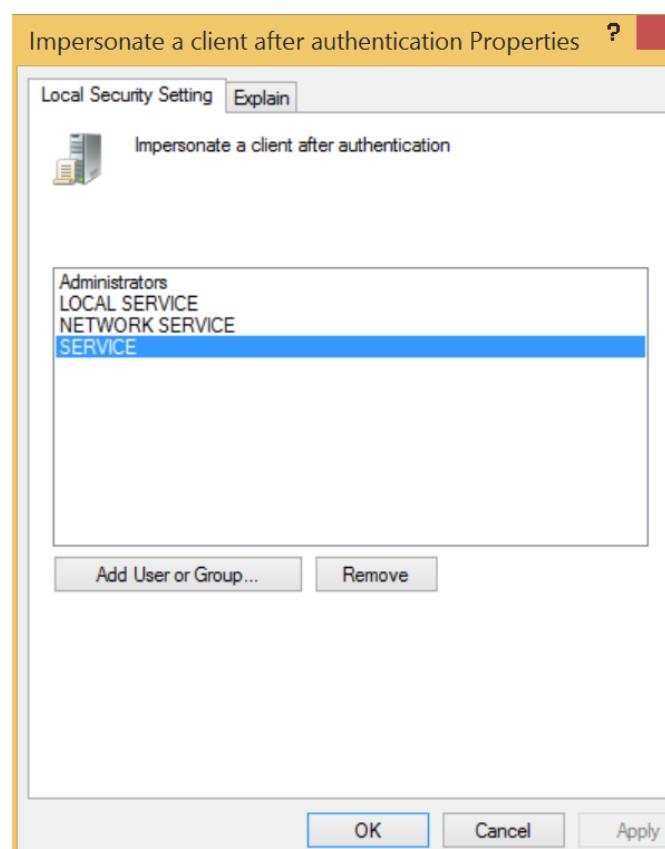

Step 3. Open “Local Policies” from “Security Settings” in “Windows Settings”

Step 4. Open “Impersonate a client after authentication” from “User Rights Assignment” in “Local Policies”.

Step 5. Verify “SERVICE” is granted for “Impersonate a client after authentication” in “Local Security Setting”

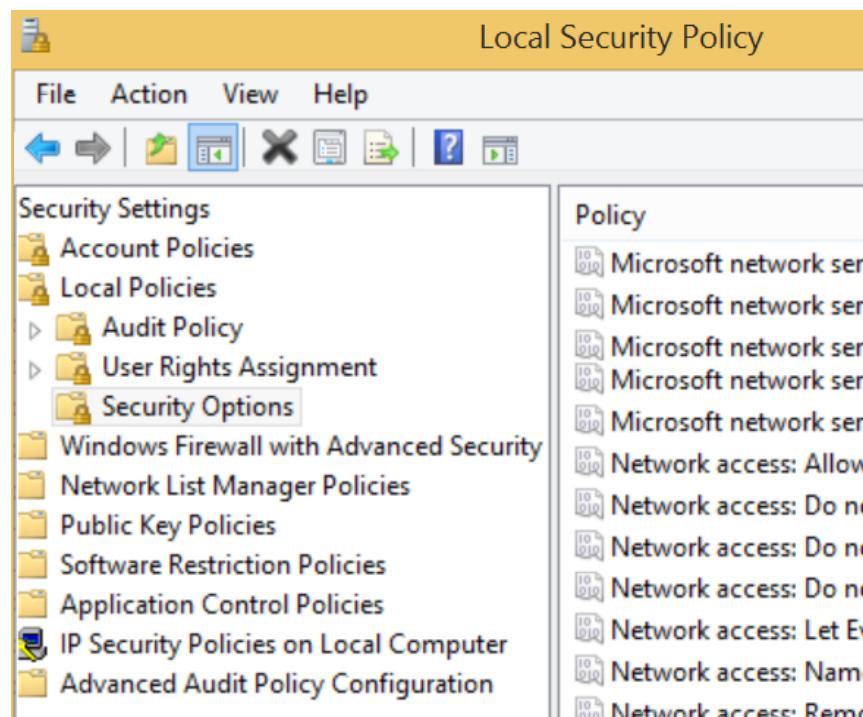

E.4. Network Access

Step 1. Search -> “**secpol.msc**”

Step 2. Run “**secpol.msc**”

Step 3. Open “**Security Options**” from “**Local Policies**” in “**Security Settings**”

Step 4. Check that the Security Setting of “**Network Access: Sharing and security model for local accounts**” is set to “**Classic**”.

The screenshot shows the "Local Security Policy" snap-in window with a different view. The title bar reads "Local Security Policy". The menu bar includes File, Action, View, and Help. The toolbar contains icons for Back, Forward, Refresh, Save, Close, and Help. The left pane displays the "Security Settings" tree view, identical to the previous screenshot. The right pane is titled "Policy" and lists a detailed list of security policies, many of which are Microsoft defaults. The policy "Network access: Sharing and security model for local accounts" is highlighted in blue at the bottom of the list.

Policy	Security Setting
Microsoft network server: Attempt S4U2Self to obtain claim information	Not Defined
Microsoft network server: Digitally sign communications (always)	Disabled
Microsoft network server: Digitally sign communications (if client agrees)	Disabled
Microsoft network server: Disconnect clients when logon hours expire	Enabled
Microsoft network server: Server SPN target name validation level	Not Defined
Network access: Allow anonymous SID/Name translation	Disabled
Network access: Do not allow anonymous enumeration of SAM accounts	Enabled
Network access: Do not allow anonymous enumeration of SAM accounts and sha...	Disabled
Network access: Do not allow storage of passwords and credentials for network a...	Disabled
Network access: Let Everyone permissions apply to anonymous users	Disabled
Network access: Named Pipes that can be accessed anonymously	
Network access: Remotely accessible registry paths	System\CurrentControlSet\Contr...
Network access: Remotely accessible registry paths and sub-paths	System\CurrentControlSet\Contr...
Network access: Restrict anonymous access to Named Pipes and Shares	Enabled
Network access: Shares that can be accessed anonymously	Not Defined
Network access: Sharing and security model for local accounts	Classic - local users authenticate ...
